

NOTEBOOK COMPUTER AND HANDHELD DEVICE DISPLAY SKIN

ABSTRACT OF THE DISCLOSURE

5 A portable data processing device is provided with first and second display devices. The first display device receives signals for displaying a first set of information, and the second display device receives signals for displaying a second set of information. The second display device forms a skin of the portable data processing device. The device also has a graphics engine for receiving data for generating display signals for the first set information and the second set of information. Driver circuits are coupled to said first and second display devices, in 10 which corresponding ones of the driver circuits are coupled to the first and second displays, the driver circuits being coupled to an output of the graphics engine. The first and second display devices have disjoint display areas.
